DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed September 25, 2003 has been placed in the application file and the information referred to therein has been considered as to the merits.

Allowable Subject Matter

Claims 1-22 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method for securely installing a data update to a target system. Independent claim 1 recites the uniquely distinct features of "transmitting said authorization list to said installation target; determining whether a serial number stored within said installation target matches a serial number stored within said authorization list; and if a match was found in said determining step, transmitting to said data loader indicia for installation to proceed". Independent claim 14 recites the uniquely distinct features of "inserting an authorization medium into said data loader; reading and decrypting a countdown datum from said authorization medium; and if the value of said countdown datum is greater than zero, transmitting indicia to the installation target directing the installation target to validate data load, otherwise, transmitting indicia to the installation target to invalidate data load". The closest prior art, Brady, JR. et al. (US 6,973,479), discloses a method for configuring a line-replaceable unit (LRU) computer

in a restricted network fails to anticipate or render the above underline limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

A. Brinkley et al. (US 20030003872) discloses a method for uploading and downloading aircraft data to a line replaceable unit computer.

B. Brinkley et al (US 20030069015) discloses a method for remotely downloading data to a line replaceable unit computer.

C. Bean et al. (US 6,460,023) discloses a software authorization system and method.

D. Larsson et al (US 6,226,747) discloses a method for preventing software piracy during installation from a storage medium.
